

Push-T E2: saved clip errors improve; paired goal retention remains incomplete

400 held-out clips; values shown without confidence intervals

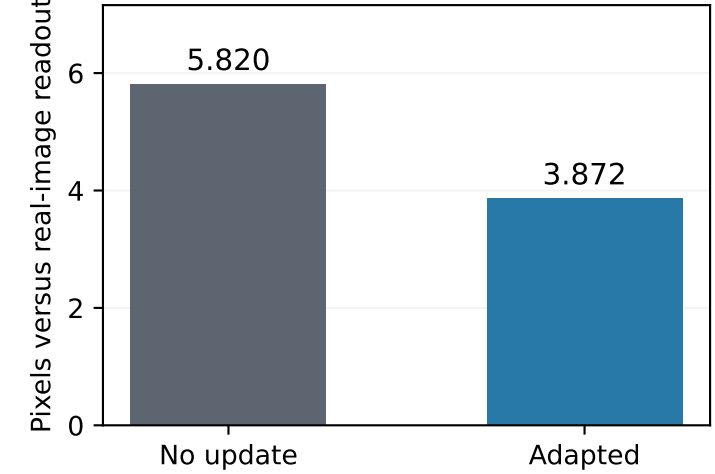

Teacher-forced latent MSE

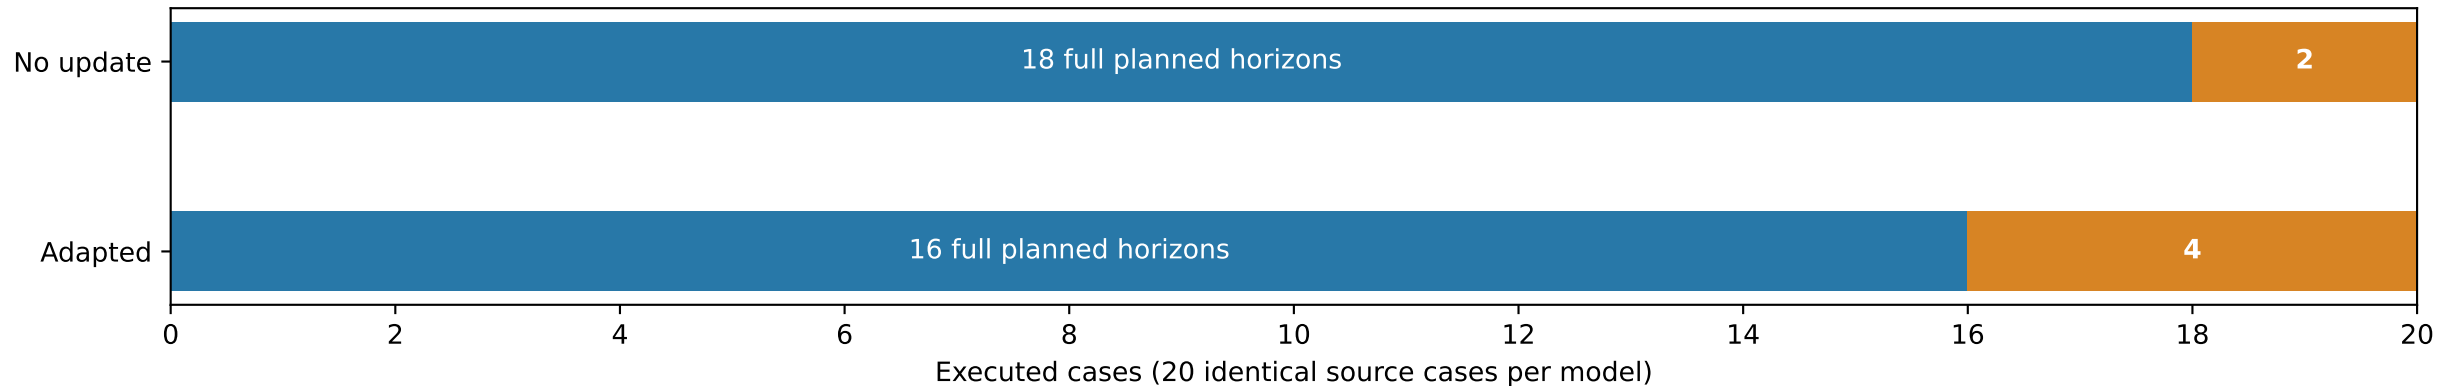

Rollout latent MSE

Horizon-5 centre error

Goal-retention execution completeness, not goal success

Full 250-action planned horizon Early unverified terminal: 2 / 4

Pose error is against the frozen real-image readout, not simulator ground truth. Full-horizon counts do not establish goal attainment. Two no-update and four adapted cases stop early below verified goal coverage; no early goal completion is verified. The retained incomplete cases prevent the paired retention criterion from passing; this is not a completed equivalence test.
